Project Name	Insurance Fraud Detection Using Machine Learning
Maximum Marks	4 Marks

Brainstorming & Idea Prioritization Template

This template provides a structured environment for teams to unleash creativity and transform a volume of ideas into prioritized technical solutions.

Step 1: Team Gathering & Problem Selection

Goal: Foster a collaborative environment and clearly define the "North Star" problem statement.

- **Action:** Gather stakeholders and engineers.
- **Focus:** Define the core challenge (e.g., "How might we detect fraud with 95% accuracy while minimizing false positives?").

Step 2: Brainstorm, Idea Listing & Grouping

Goal: Prioritize volume over value. Build upon others' ideas and categorize them.

- **Action:** Use digital sticky notes for rapid fire ideation.
- **Grouping:** Cluster related ideas (e.g., "UI Enhancements", "ML Optimization", "Data Privacy").

Step 3: Idea Prioritization

Goal: Identify the "Quick Wins" and "Strategic Bets" using a 2x2 Impact vs. Effort matrix.

- **Low Effort / High Impact:** Implement immediately (e.g., specific input validation).
- **High Effort / High Impact:** Plan for next phase (e.g., Advanced Gradient Boosting integration).
- **Low Impact:** Discard or backlog.
